Queen_Challotte

Version   : 0.0
Abstract idea : Just my personal website 🥺
Date   : 05 /03/2025
Author   : Emihle Challotte Booi

I portray an emotion of connectedness through my work. It's not just another website, it's a feeling of getting to know me!

It's called scrollytelling
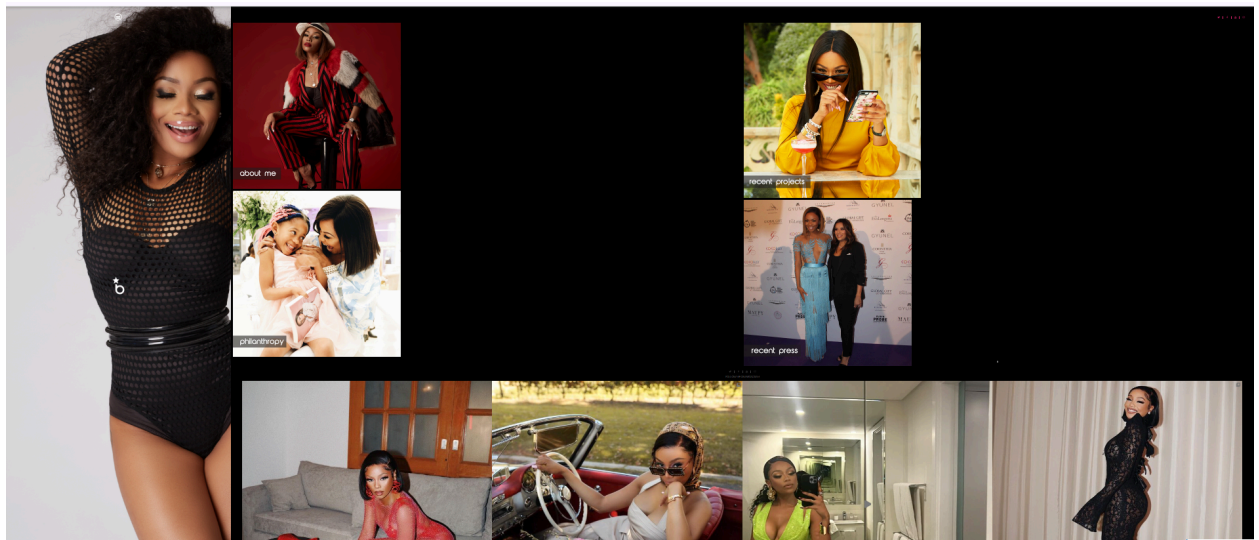

Table of Content

Introduction

Purpose of the Report:

This report serves as a structured plan for my website development. It outlines what features will be implemented, how they will be implemented, and any challenges encountered along the way. The goal is to ensure an organized and efficient development process by documenting key decisions, progress, and future improvements.

Project Overview

Queen_Challotte is my personal site where I aim to paint myself the way I have in my brain. From the core aspects that drive me everyday to those that inspire me in this road. I aim to achieve a level of formality for my modelling portfolio as well as my tech career.Target user is everyone.

The homepage will be inspired by one of my favourite Queens websites.

Of course it will have more definition and refined layouts than this one. Include tiles like Current Projects, Hobies,LifeResume which shall include both my fails and victories, InterestedIn and of course the inevitable About Me tile.It will be worth it!

Potential Concerns:

I am not building a personal brand but rather a platform where I can showcase my full competitiveness and self formally therefore the ability to show that might be tricky.

What will distinguish your web page from one made by an ai?

It is the feeling. I don't create web pages, I design,tailor and craft them. I provide connection to what is being portrayed and who it is portrayed for, not just the finished work.

TechStack

- Frontend:

  React (main framework/library for building UI), HTML & CSS (for layout and styling),JavaScript (React uses this under the hood)

- Backend:

  Node.js (runtime for server-side code),Express (likely used for building APIs with Node — let me know if you're not using it)

- Database:

  Firestore (NoSQL cloud database from Firebase)

Welcome to
Q_Challotte

Hey there, Iam a developer,model and the most
optimistic person u will ever meet.Inside,u will
find my work,interests & goals for future.

I'm aiming to find those individuals that have the
means to grant me the opportunity to reach my
optimal best.

About me

SPOT A BUG?

Ideas:

The hero banner will alternate between 2 images (the star will emanate from left to right and when it's reach that position the glowing layout will form then the picture will start showing) on hover flip the image to show the other one.

SPOT A BUG?

Plans for the page:

- Kinda have to think of the proper way to navigate inside the page ….. Should i have a button or what?no buttons, each tile will be clickable, directing to it's corresponding page!

SPOT A BUG?

Plans for the page:

- When you click each tile, the corresponding information will just pop up on top op the tech stack. (no redirecting)
-

WELCOME TO THE BEST PART OF MY LIFE

the social meadia icons

SPOT A BUG?

Plans for the page:

- Catwalk , outside creativity , studio shoots respectively.
- Each click of a tile just corvers all tiles and shows the component that corresponds to those images with the css effect that's cinematic. The top part will have back button just go back to exactly this phase.

Morkup:

What font?What is the graphic in that font? Why that font? What colour?
What texture of that colour and why?

What kind of emotions do you want to portray in each page and is what you have designed and ideally plan good enough to evoke those emotions over the screen?

Prototype:

Feature Breakdown & Implementation Plan

Feature	Description	Implementation plan(include backend)	Done?	Notes
			☐

Development Roadmap (Timeline)

Phase	Task	Estimated_time	Status

Issues, Challenges & Solutions

Issue	Cause	Solution	Status

Future Improvements & Next Steps

Features to add: (that will be a different version)

Code Refactoring Plans:(Planning to clean up or even change colors)

New Technologies to Explore: (Any frameworks, tools, or libraries you want to try.)

Have you thought of the sounds? Like the background sound for your web page??????????? But there should be different kinds of genres to fit each category perfectly….. They should fade into each other

Think of the animation type of website, where you draw people inside it (more like taking them into your world)
